No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.

Sequence 38921, Application US/10953349

Publication No. US20060107345A1

GENERAL INFORMATION:
APPLICANT: ALEXANDROV, Nickolai et al.
TITLE OF INVENTION: SEQUENCE-DETERMINED DNA FRA
TITLE OF INVENTION: ENCONDED THERBY
FILE REFERENCE: 2750-1579US2

CURRENT APPLICATION UMMBER: US/10/953,349

CURRENT FILING DATE: 2004-09-30

NUMBER OF SEQ ID NOS: 40252
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        LENGTH: 45

The present invention relates to adeno-associated virus serotypes. The present sequence is the DNA sequence of one such serotype (AAV6). AAV6 can be used to contruct AAV viral vectors for use in gene therapy for a range of disorders: cystic fibrosis, cancer, AIDS, atherosclerosis, sickle cell anaemia, thalassaemia, blood clotting disorders and diabetes.

Adeno-associated virus serotype 6 and viral vector derived from it gene therapy of cystic fibrosis, cancer, acquired immunodeficiency syndrome, sickle cell anemia, thalassemia and diabetes.

```
CC parvovirus rep coding sequences and parvovirus cap coding sequences. The CC rep coding sequences encodes a DNA binding domain from a first CC from the first parvovirus. The cap coding sequences comprises sequences (I); (2) a cell comprising (I), or parvovirus parvovirus cap coding sequences (I); (2) a cell comprising (I), or parvovirus rep coding sequences and CC parvovirus cap coding sequences, where the rep coding sequences and CC DNA binding domain from a first parvovirus and a capsid interacting CC domain from a parvovirus different from the first parvovirus, the cap coding sequences ecomprises sequences from the different parvovirus, and CC the rep coding sequences are stably integrated into the genome of the cell; and (3) producing a recombinant hybrid parvovirus particle or adeno CC capsociated virus (rAAV) particle. (I) can be used in vaccines, and in CC gene therapy. The polymucleotide (I) can be used in producing higher stocks of hybrid parvoviruses or parvovirus vectors, which may be used in consistency of nucleic acids having biological effect to treat or ameliorate the symptoms associated with any disorder related to gene captures and in the expression. The polymucleotide may be used to produce a parvovirus vector constitute vector may also be used to produce a parvovirus vector constitutes vector may also be used to produce an antisense nucleic consense invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

                                                                             Query Match
                                                                                                              frames for rep and capsid (cap) proteins. The rep reading frame encodes four proteins, Rep 78, Rep 68, Rep 52 and Rep 40, while the cap reading frame encodes three structural proteins, VP1, VP2 and VP3. The AAV-1 sequence or its fragments particularly ITRs, rep and cap coding regions, are useful in production of recombinant viral vectors for gene delivery. These vectors can be used as gene therapy vectors, vaccine vectors or antisense delivery vectors. The AAV-1 does not induce the formation of neutralising antibodies specific to any serotype of AAV hence is useful for transforming host cells, and in the preparation of a medicament for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      SgS

The invention relates to a novel method for detecting adeno-associated virus (AAV) sequences in a sample, which comprises subjecting a sample containing a DNA to amplification via a polymerase chain reaction (PCR). The AAV sequence have the following activities: cytostatic, antipporiatic, antirheumatic, antiarthritic, neuroprotective, antidiabetic, antithyroid, dermatological, and antiinflammatory. The AF antidiabetic, antithyroid, dermatological, and antiinflammatory.

The method is useful in detecting and/or identifying AAV sequences and isolating novel sequences that are identified. The sequences may be used e.g. for preventing or treating hyperproliferative conditions such as cancers and psoriasis, and other autoimmune diseases like rheumatoid arthritis, multiple sclerosis, diabetes, autoimmune thyroiditis, scleroderma or Crohn's disease. This polynucleotide sequence represents an AAV related DNA sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 4718 BP; 1121 A; 1393 C; 1273 G; 931 T; 0 U; 0 Other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Match

New expression construct comprising a nucleic acid sequence encoding an adeno-associated virus integration efficiency element, useful for treating cancer e.g. lung cancer or colon cancer or inflammatory disease

Disclosure; SEQ ID NO 3; 62pp; English

The invention relates to an expression construct comprising a nucleic CC acid sequence encoding an adeno-associated virus integration efficiency CC element (AAV IEE), which is devoid of AAV inverted terminal repeats (AAV ITRs) and site-specifically integrates into a host cell chromosome when CC provided to the host cell in conjunction with an AAV Rep protein. The CC expression construct can be used as a therapeutic factor for treating a CC mammal for a pathologic state which is cancer, including lung cancer, CC colon cancer, renal cancer, anal cancer, bile duct cancer, bladder CC cancer, bone cancer, prain cancer, spinal chord cancer, breast cancer, CC cervical cancer, gastrointestinal cancer, laryngeal cancer, leukemia, CC liver cancer, multiple myeloma, neuroblastoma, ovarian cancer, pancreatic cancer, prostatic cancer, retinoblastoma, skin cancer, stomach cancer, CC testicular cancer, thymus cancer or thyroid cancer. Other pathologic state includes inflammatory disease (attritis), neurodegenerative CC disease, a disease of an organ attributed to the presence of increased or decreased level of a particular gene product(s). This sequence

The present invention describes a polynucleotide (I), comprising CC parvovirus rep coding sequences and parvovirus cap coding sequences. The CR parvovirus, and a capsid interacting domain from a first CR parvovirus, and a capsid interacting domain from a parvovirus different parvovirus. The cap coding sequence comprises sequences (I); (2) a cell comprising (I), or parvovirus rep coding sequences and CR parvovirus cap coding sequences, where the rep coding sequences encode a DNA binding domain from a first parvovirus and a capsid interacting CR domain from a parvovirus different from the first parvovirus, the cap CR domain from a parvovirus different from the different parvovirus, and CR the rep coding sequences are stably integrated into the genome of the cell; and (3) producing a recombinant hybrid parvovirus particle or adeno CR capsciated virus (rAAN) particle. (I) can be used in vaccines, and in CR gene therapy. The polynucleotide (I) can be used in producing higher CR stocks of hybrid parvoviruses or parvovirus vectors, which may be used in capsis or meliorate the symptoms associated with any disorder related to gene capscistion. The polynucleotide may be used to produce a parvovirus vector may also be used to produce a parvovirus vector conception of the present sequence is used in the exemplification of the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a novel recombinant herpes simplex virus (rHSVS) whose genome is respectively inserted by the Adeno-associated virus (AAV) rep gene and cap gene. The AVV genes may be derived from viruses AAV1, AAV2, AAV3, AAV4, AAV5 and AAV6. The methods of the invention may be useful for generating recombinant vectors with high efficiency and no need of reconfiguration. The current sequence is that of the Adeno-associated virus 2 (AAV2) rep-Adeno-associated virus 1 (AAVI) cap fusion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ₩u X,

The invention relates to a recombinant herpes simplex virus (HSV) CC characterized in that its genome is inserted with a DNA sequence selected from nucleotide sequences of ADZ46594-ADZ46598 or their homologous compared the recombinant HSV (comprising the construction of DNA fragments that contains sequences ADZ46594 - CC ADZ46598, and respectively inserting these 5 DNA fragment HSV (comprising the construction of DNA fragments that contains sequences ADZ46594 - CC ADZ46598, and felly preparing the recombinant adeno-associated viruses (AAV) CC 1, 3, 4, 5, and 6 (by preparing the recombinant HSV, producing the corresponding vector cell-line with the 5 recombinant HSV, producing recombinant AAV under the infective effect of the 5 recombinant HSV in the vector cell-line, separating and purifying the 5 serotype recombinant CC crude lysate and further purification of rAAV by density-gradient centrifugation or affinity chromatography) and a recombinant vector centrifugation with in each of AAV-1, AAV-3, AAV-4, AAV containing ITR at both ends of AAV-1, AAV-3, AAV-4, AAV containing ITR at both ends of AAV-1, AAV-3, AAV-4, AAV containing the and a polyA signal, respectively, between the ITR (inverted terminal repeat), and neomycin-resistance genecatives and seasette at outer edge of ITR). The DNA sequence is inserted to to AAV-6 genome. The recombinant HSV is optionally inserted with other DNA sequences homologous with the already-specified fragments. The vectors are safe, with long centre and wide spectrum of cell infection, even non-cleaved cells and reverse axonal conduction through the incorporated HSV vectors, and h
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Matches

Structure 1; SEQ ID NO 1; 102pp; Chinese. of a recombinant herpes simplex virus and 116

The invention relates to a novel recombinant herpes simplex virus (rHSVS) whose genome is respectively inserted by the Adeno-associated virus (AAV) rep gene and cap gene. The AVV genes may be derived from viruses AAV1, AAV2, AAV3, AAV4, AAV5 and AAV6. The methods of the invention may be useful for generating recombinant vectors with high efficiency and no need of reconfiguration. The current sequence is that of the Adeno-associated virus 2 (AAV2) rep-Adeno-associated virus 1 (AAV1) cap fusion DNA (SEQ ID 1) of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           멍
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         δ
The invention relates to a recombinant herpes simplex virus (HSV) characterized in that its genome is inserted with a DNA sequence selected from nucleotide sequences of ADZ46594-ADZ46598 or their homologous sequences. Also included are preparing the recombinant HSV (comprising the construction of DNA fragments that contains sequences ADZ46594-ADZ46598, and respectively inserting these 5 DNA fragments into genome of HSV by applying genetic engineering to give the recombinant HSV), largescale production of 5 serotype recombinant adeno-associated viruses (AAV), 1, 3, 4, 5, and 6 (by preparing the recombinant HSV, establishing a one-strain vector cell i.e. recombinant AAV vector cell-line, infecting the recombinant HAV, under the infective effect of the 5 recombinant HSV in the vector cell-line, separating and purifying the 5 serotype recombinant AAV after lysing the AAV-containing cells and culture liquor to give a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Large-scale production, isolation and purification of serotype adeno-
associated virus vectors by infecting cells with recombinant herpes
simplex virus vectors, for use in gene therapy of e.g. cancer and
respiratory diseases.

The DNA sequence of sequence ADZ46594-ADZ46598 can also be inserted into other non-essential gene regions in HSV genome. The recombinant HSV is optionally inserted with other DNA sequences homologous with the already-specified fragments. The vectors are for use in gene therapy of e.g. cancer, respiratory cornected sequence and neural diseases. The virus vectors are safe, with long cexpression time and wide-spectrum of cell infection, even non-cleaved corls and reverse axonal conduction through the incorporated HSV vectors, and high transfer efficiently. The present sequence is the HSV-AAV cornected sequence rep2capl for the AAV/HSV vectors of the invention.                                                                                                                                                                                                                                                                 The invention relates to a novel method for detecting adeno-associated virus (AAV) sequences in a sample, which comprises subjecting a sample containing a DNA to amplification via a polymerase chain reaction (PCR). The AAV sequence have the following activities: cytostatic, antipsoriatic, antithyroid, dermatological, and antiinflammatory. The AAV sequence can be used in gene therapy or as part of a vaccine to treat disorders. The method is useful in detecting and/or identifying AAV sequences and isolating novel sequences that are identified. The sequences may be used e.g. for preventing or treating hyperproliferative conditions such as cancers and psoriasis, and other autoimmune diseases like rheumatoid arthritis, multiple sclerosis, diabetes, autoimmune thyperproliferative sequences such as cancers and psoriasis, and other autoimmune diseases like rheumatoid arthritis, multiple sclerosis, diabetes, autoimmune
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Detecting adeno-associated virus sequences in a sample, useful for preventing or treating hyperproliferative or autoimmune diseases, comprises subjecting a sample having a DNA to amplification via polymerase chain reaction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gao
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                antiarthritic; neuroprotective; antidiabetic; antithyroid; dermatological; antiinflammatory; gene therapy; vaccine; hyperproliferative; cancer; psoriasis; autoimmune disease; rheumatoid arthritis; multiple sclerosis; diabetes;

```
The present invention describes a polynucleotide (I), comprising CC parvovirus rep coding sequences and parvovirus cap coding sequences. The CT coding sequences encodes a DNA binding domain from a first coding sequences encodes a DNA binding domain from a first coding sequences encodes a DNA binding domain from a parvovirus different coding sequence comprises sequences coding the first parvovirus. Also described: (1) a vector comprising (I), or parvovirus rep coding sequences and coding sequences, where the rep coding sequences and coding sequences, where the rep coding sequences encode a coding sequences comprises and coding sequences and coding sequences and coding sequences from the first parvovirus, the cap coding sequences comprise sequences from the first parvovirus, and coding sequences comprise sequences from the different parvovirus, and coding sequences are stably integrated into the genome of the cell; and (3) producing a recombinant hybrid parvovirus particle or adeno coding sequences are stably integrated into vaccines, and in code therapy. The polynucleotide (I) can be used in vaccines, and in code therapy. The polynucleotide (I) can be used in producing higher coding the the symptoms associated with any disorder related to gene comprises an immunogenic polypeptide in a subject, e.g. for vaccination.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              र्
